

Press release

Elecnor has been awarded the construction of a new 185 MW wind farm in Chile

- The group will install 44 turbines that are 72 metres high, which will add a power capacity of 185 MW
- Work at Cerro Tigre wind farm is expected to be completed in 2021

Madrid, 2 July 2020.- The Spanish infrastructure, energy and telecommunications group, Elecnor, has been awarded the construction of a new wind farm in Chile backed by Mainstream Renewable Power, which will provide clean energy to the national grid from 2021.

Located 50 kilometres from the city of Antofagasta, in a desert and relatively flat area, with heights of between 660 and 800 metres, the Cerro Tigre wind farm will have a power generation capacity of 185 MW.

Elecnor will be responsible for the full execution of the Balance of Plant (BOP), which includes the installation of 44 72 metre-high turbines of 4.2 MW each. In addition, the group will build a new booster substation, a 220 kV transmission line, over 20 kilometres of track, and the rest of the auxiliary civilian infrastructure. The contract also includes the expansion of another existing booster substation by building a 12 kilometre-long transmission line with 220 kV. The works are scheduled for completion in 2021.

Elecnor has been operating in Chile since the 1980s and has played a crucial role in energy development in the country by generating and transmitting power, developing non-conventional renewable energy (NCRE) and applying energy savings at its facilities.

About Elecnor

Elecnor is a leading Spanish business group in the infrastructure, renewable energy and new technology sectors. With over 60 years of continuous growth and a presence in 55 countries, Elecnor operates in

various sectors, including electricity, gas, industrial plants, railways, telecommunications, water, control systems, construction, the environment, installations maintenance and aerospace engineering. Elecnor's strong international vocation has led the company to embark on a continuous expansion process that has opened doors to new markets all over the world, mostly in Europe, North America, Central America, South America, Africa, Australia and the Middle East. Elecnor is listed on the Continuous Market and has a team of highly qualified professionals and a workforce of 14,855 employees. In 2019, the company reported revenues of EUR 2.454 billion and a consolidated net profit of EUR 126.4 million. For more information, please visit www.elecnor.com

About Mainstream Renewable Power

Mainstream Renewable Power is an international company of Irish origin, which has operated in Chile since 2008 and a leader in the development of large-scale wind and solar energy projects. The company has a portfolio of new projects under development in Latin America, Africa, Asia and Europe amounting to more than 9 GW. In Chile, Mainstream's solar and wind projects seek to provide more than 4,000 MW of clean energy to the national energy grid.
