Elecnor Deimos renews its certification for responsible management and good anticorruption practices

- ▶ Elecnor Deimos, the Elecnor Group technology subsidiary, has been awarded the UNE 19601 and ISO 37001 certificates for its effectiveness in compliance management systems
- ▶ The Elecnor Group was the first company in its sector in Spain to receive the ISO 37001 certification in 2018

Bureau Veritas has awarded the UNE 19601 and ISO 37001 certificates to Deimos Space, S.L.U. and Deimos Engineering and Systems, S.L.U., and the ISO 37001 certificate to the foreign subsidiaries Deimos Space UK LTD (United Kingdom), Deimos Engenharia, S.A. (Portugal) and Deimos Space S.R.L. (Romania), following the recertification audit, thereby verifying and confirming that their Legal Compliance and Anti-Bribery system is a fully effective instrument [in the fight against corruption](#), in preventing crime, reducing risks and managing any illegal conduct. Both certifications are accredited by ENAC (Spanish National Accreditation Body), and endorse the responsible management and [good practices at Elecnor Deimos](#) in this area.

Elecnor Deimos has a robust compliance management system, strongly rooted in the Elecnor Group compliance management system, from which it receives constant feedback, and, at the same time, an independent management system at company level. Deimos Space, S.L.U. was one of the first companies in the space sector to obtain the UNE 19601 and ISO 37001 certificates (awarded for the first time by AENOR in 2019), thereby taking a great step forward in its sector in terms of legal and anti-corruption compliance. Since then, it has further reinforced all its policies, internal regulations and ongoing employee training, and is currently making progress in its ambitious digital transformation process for compliance management.

Bureau Veritas was the independent certification body responsible for the external assessment and control, in verifying that the company's Legal and Anti-bribery Compliance System met the requirements specified by the national standard UNE 19601 and the international standard ISO 37001, for the recertification of both standards, which involved the reconfirmation and recognition that the company meets the Spanish compliance standard and the international anti-bribery standard. The certificates issued by Bureau Veritas have been awarded to the company Elecnor Deimos with a 3-year validity period.

"The corporate culture of Elecnor Deimos is based on business ethics and legal compliance. For this reason, the awarding of these new certificates issued by Bureau Veritas stand for a reaffirmation and an acknowledgement of the principles and values that guide our actions in the performance of our activity, as well as our commitment to transparency and good governance," states Ismael López, CEO of Elecnor Deimos. To this effect, the company advocates zero tolerance, both internally and in its relations with clients, suppliers and partners regarding any type of criminal activity and, especially, in fighting to corruption.

"With these two certifications, Elecnor Deimos shows its commitment to good business practices and the strict control of any fraudulent activity that could occur within the Group companies," commented Pedro González, Director of Sustainability and Corporate Risk at Bureau Veritas, during the certification award ceremony.

Press release

Madrid, 19 February 2024

These certifications further strengthen the position of Elecnor Deimos as the leader of its sector and emphasise its commitment to transparency and integrity in all its activities. With its unwavering approach to regulatory compliance and corporate responsibility, Elecnor Deimos continues to demonstrate its leadership in the sectors where it operates.

About Elecnor Deimos

Elecnor Deimos, a subsidiary of Elecnor Group, is a European technology company founded in 2001, with about 500 employees. It is based in Spain and has subsidiaries in five countries. It currently operates in the sectors of space, transport, aeronautics and maritime, and also designs and implements digital transformation processes.

Elecnor Deimos has developed numerous space technologies and tools as a result of over 500 contracts with the ESA, NASA and other agencies. In addition to engineering work, the company provides operational infrastructure services, both in space and on the ground, for the monitoring and reception of satellite data and for the DEIMOS Sky Survey Centre.

It offers comprehensive services for space systems, as well as being in line with the NewSpace philosophy, encompassing the design and integration of small satellites, the development and operation of micro-launcher subsystems, the operation of Earth observation satellites, data supply, and end-user applications and services.

About Elecnor Group

The Elecnor Group is a Spanish enterprise doing business in over 50 countries that stands out for its profitability, recurring revenue, and moderate risk. It is an international leader in building, managing, and operating renewable energy concessions, sustainable infrastructure projects, and essential services for energy transition and city digitalisation. It is a globe-spanning company driven by a people-based business model dedicated to creating shared value and sustainability. The Group's activities are organised along three strategic tracks: concessions and self-operated projects, essential services, and sustainability projects. Its strong international outlook has led it to a continuous expansion process which has opened the doors to new markets around the world, especially in Europe, North America, Central America, South America, Africa, Australia and the Middle East. Elecnor, which is listed on the Continuous Market, has a highly qualified team of professionals and a total workforce of 23,160 employees. In 2022, the company reported revenues of 3,613.7 million euros and a consolidated net profit of 102.8 million euros.
